- * describe data
- * compare data

The graph below shows the consumption of three spreads from 1981 to 2007.

Summarise the information by selecting and reporting the main features, and make comparisons where relevant.

Write at least 150 words.

Detailed Paragraphs (2 or 3 paragraphs)

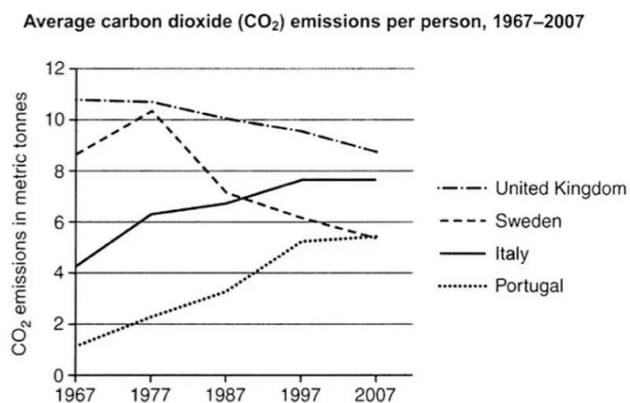

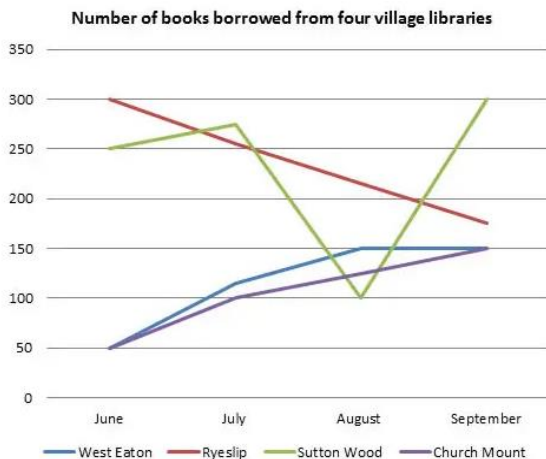

These paragraphs should include all other details, grouping information as much as possible.

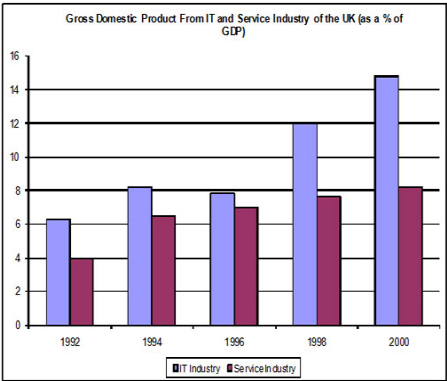

Detailed Paragraph – 1

With regards to the amount of butter used, it began at around 140 grams, which was the highest consumption rate of all. Following this, the butter consumption rose and peaked at 160 grams in 1986 before falling dramatically to about 50 grams in the last year. **Likewise**, approximately 90 grams of margarine was eaten in the first year after which the figure fluctuated slightly. Despite a period of stabilization between 2001 and 2006, the figure then dropped to a low of 40 grams in 2007. This meant that the lowest quantity of margarine was consumed at the end of the period.

Detailed Paragraph – 2

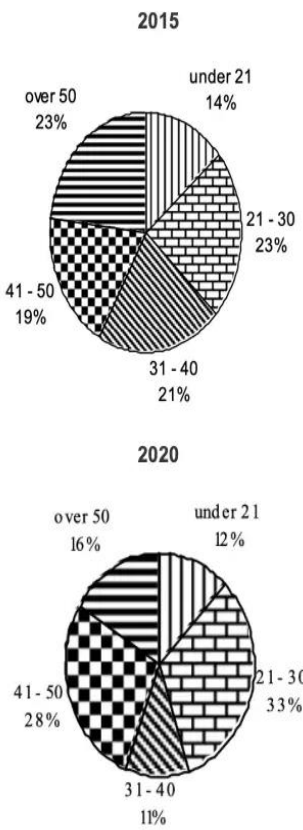

On the other hand, the consumption of low fats and reduced spreads only started in 1996 at about 10 grams. This figure, which reached a high of just over 80 grams five years later, fell slightly in the final years to approximately 70 grams in 2007, this figure being significantly higher than the other two types of spread.

Secondary School Attendance

	2000	2005	2009
Specialist Schools	12%	11%	10%
Grammar Schools	24%	19%	12%
Voluntary-controlled Schools	52%	38%	20%
Community Schools	12%	32%	58%
